

Research Stats · project handoff

Jade Zhao · zhao-langxi · 14 September 2026 · UK English · public / hire-facing only

Shareable artifact for the Research Stats board. Design-tool Make access failed, so this PDF pack is the handoff (no design-tool login required). Market percentages are industry research *inputs*, not personal achievement metrics. No clinical or IRB material.

1. Project goal

Turn CV market-research figures into a **how/why shipping board**: each published stat answers *what*, *why it matters*, and *what to build*, so next work is prioritised from evidence instead of vibes.

- Resume research already collected public stats across five themes.
- Those numbers are useful only if they drive a next build, essay, or hire story.
- The board is the product: filterable cards, cluster selection, lockable next-project idea.

2. What's shipped

Piece	Path
Board HTML	~/Documents/zhao-langxi/work/research-stats.html
Board JS	~/Documents/zhao-langxi/js/research-stats.js
Stats + KPI pack	~/Documents/jadezhao1/portfolio/resume-ats-research-stats/

- **15** stat cards · **5** themes (3 each): Digital Humans, Privacy, UX, Nonprofit, Restaurant
- Every card: What · Why it matters · What to build
- **5 interaction patterns**: theme filters · multi-select (max 3) · cluster stepper · project lock · localStorage notes
- Inbound links: `index.html`, `work/digital-humans.html`, `work/serve-ai.html`

3. Product KPIs

Countable from the shipped HTML/JS. Re-run: `kpi-report.sh` in the stats pack.

Product KPI	Value	Notes
Stat cards	15	From STATS in research-stats.js
Themes	5	Equal share: 20% each (3/15)
Layer coverage	100%	Cards with what / why / what-to-build
Action throughput	100%	15/15 mapped to what-to-build
Themes with ≥3 stats	100%	All five themes
Interaction patterns	5	See section 2
Inbound linking	20%	3/15 other HTML pages link to the board
GitHub Pages URL	Not live (404)	Local ship only until deploy

Simulations (her analysis of published inputs)

Simulation	Formula	Result
Adoption-scale gap	$\text{gap_pp} = 72 - 5$	67 pp
Clarity deficit	$100 - 20$	80 pp
Nonprofit strategy gap	$92 - 7$	85 pp
Restaurant social vs web	$99 - 69$	30 pp (not a personal revenue claim)
Top priority score	$100 \times \text{weight} \times \text{urgency}$	95.0 on dh-5

Shipped research board covering 15 stats across 5 themes (100% of cards with what / why / what-to-build layers); ran gap analysis on published inputs (72% adoption vs 5% at-scale = 67 pp) to prioritise Digital Humans how/why work.

4. Market inputs vs personal / product KPIs

Type	Examples	Claim as hers?
Market research inputs	72% generative AI (McKinsey); 5% at scale (MIT); 20% clarity (Deloitte); 92%/7% nonprofit (Virtuous); 99% vs 69% social/web	No ... citations / board inputs only
Product KPIs	15 cards, 100% layer coverage, 5 interaction patterns, inbound %	Yes ... from shipped artifact
Her simulations	67 pp gap; priority 95.0 on dh-5	Yes ... as analysis of published inputs
Other durable personal	GPA 3.50; May 2027; MAP 50+ first-generation and low-income peer mentors	Yes ... already hers

5. IA / screen map

A. Theme filters

What: Five tabs (Digital Humans · Privacy · UX · Nonprofit · Restaurant).

Why: One theme at a time; footer throughline follows the tab.

What to build: Keep tabs = themes; default Digital Humans.

B. Stat cards

What: Big number + claim; category; What / Why / What to build; role link.

Why: Forces every market figure into shipping language.

What to build: Never ship a card with only a percentage.

C. Multi-select

What: Select up to 3 cards; count shows $n / 3$; persists in localStorage.

Why: Clustering = pick a next project from evidence.

What to build: Cap stays at 3.

D. Cluster stepper + lock

What: Appears when 2 to 3 selected cards span themes; Previous / Next / Lock.

Why: Cross-theme picks need an explicit next-build idea.

What to build: Theme project ideas already in JS; Lock persists.

E. Session notes

What: Textarea; auto-save to localStorage.

Why: Capture this week's ship intent next to the lock.

What to build: Keep local-only.

Happy path: open board → Digital Humans → select 2 to 3 cards → stepper if multi-theme → Lock → notes → build elsewhere.

6. How to open locally + Pages URL

```
cd ~/Documents/zhao-langxi
python3 -m http.server 8080
# http://localhost:8080/work/research-stats.html
```

Absolute paths: /Users/jadexzhao/Documents/zhao-langxi/work/research-stats.html and .../js/research-stats.js.

Future public URL (404 until deploy): <https://zhao-langxi.github.io/zhao-langxi/work/research-stats.html>

Do not claim a live Pages URL until after push/deploy to zhao-langxi/zhao-langxi.

7. Next builds by theme (Digital Humans first)

#	Theme	Next build
1	Digital Humans	Disclosure + override pattern library for a Digital Humans demo, plus a short “after the demo” handoff note. Driven by 72% vs 5% (67 pp) and top score on dh-5.
2	UX	Progressive-disclosure consent flow with a tiny comprehension check, then write the mini-case.
3	Privacy	Plain-language data-use panel for portfolio prototypes (consumer / app trust only).
4	Nonprofit	One-page AI adoption checklist for a small nonprofit (policy stub + accessibility + override owner).
5	Restaurant	Social ↔ website consistency audit template for a local restaurant (no invented sales numbers).

8. Guardrails

- UK English; pauses with ...; ranges with to (no em dash).
- No AI product / tool brand names on shareable copy.
- No IRB, clinical, or private field data.
- Market % = inputs; product % and labelled simulations = hers.
- This PDF pack replaces the design Make file as the shareable handoff.
